

U. That's cool. What have you learned in the business world that you'd like to pass onto college students? Any good business lessons?

MW We hire a lot of kids straight out of college for internships and that kind of thing. I can kind of give some tips to the new kid at the company if you're interning or if you are just starting out, like the lowest peg on the totem pole – I could give some tips about that...

U. Just some advice, something that you probably didn't know, like you were green and just coming out of college....

MW Hmmmmmm.....: You know when you first start out at a company, you have no idea how the corporate world works, and you're going to make mistakes and you're going to feel like cr@p. You just have to learn from them and not beat yourself up over them because it's your first job out of college and you don't know what to wear or when it's appropriate to ask a question because some people say, "You should always ask questions" but others say "You should be a self starter" and there is no one right answer or one right way. Just be prepared to make mistakes. And don't come to work in ripped jeans!

U. Even your job?

MW Well I shouldn't really say ripped jeans, more like a ripped tee shirt, ripped jeans are in style right now and that's a bad example, but I know this is your first job, I know you are just starting out, but look professional, there's casual and then there are holes in your shirt. This is not your frat house, this is your job. I see some of these interns, it's a pretty casual workplace, so they think "Oh I can come in with Cheetos stains on my shirt." Not that casual. There is a limit.

U. What would you like to accomplish in your career?

MW Right now it's strangely important to me to educate people about technology. I used to work on a more technological show and you want to educate people on technology because it can be so difficult and there are people out there trying to make it more difficult in order to make them feel better about themselves, so I would like to help educate people about technology. Right now I'm focusing more on video games, you know I feel good when I help a ten-year old save \$50 which is probably the only \$50 he's going to get that year to spend on a video game. I like educating people even if it is in weird esoteric ways.

Thanks very much for your time; I really appreciate you talking with me today!
